

Alphora Research Inc. Recruitment Profile

Junior and Intermediate Synthetic Organic Chemists

Alphora Research Inc. is a contract research, development and manufacturing organization in the field of active pharmaceutical ingredients (API's), synthetic organic chemistry and analytical sciences. Alphora Research Inc. is a growth oriented organization with a strong capital base and a continuing flow of interesting and challenging projects resulting from established alliances with global pharmaceutical companies.

Refer to our website www.alphoraresearch.com for further information on our company.

Alphora Research Inc., which began operation six years ago, has built a first class team of scientists and state of the art research facilities as well as new pilot plant and cGMP kilo-Labs for scale-up manufacture of API product at a different levels of development

We are currently working on some exciting projects and we urgently require Junior and Intermediate Synthetic Organic Chemists to enable Alphora to meet the committed growth in new projects.

The Opportunity:

- These junior and intermediate chemists will work on projects to research, develop and implement process technologies for active pharmaceutical ingredients, with particular emphasis on new route discovery and analytical development.
- They will collaborate with Alphora's biotech and pharmaceutical partner companies on project-related topics that include but not limited to:
 - Development of tactical and strategic options for active pharmaceutical ingredients as part of new drug development, including technological, regulatory and commercial considerations.
 - Selection of manufacturing options for intermediates and active pharmaceutical ingredients.
- This is an excellent opportunity for chemists with significant pharmaceutical industry experience.

Responsibilities will include but not limited to:

- Actively involved in synthetic process research and development by planning and executing experiments in R&D laboratories, collecting and analyzing data and observations, preparing reports.
- Conduct peer review of experimental records and reports on process development.
- Author project updates and process development reports.
- Maintain work area in the laboratory in an organized state and follow safe laboratory practices.
- Assist technology transfer activities in manufacturing facilities.
- Order laboratory chemicals and supplies.

Experience and Education Requirements:

- B.Sc./ M.Sc. degree with 3 to 5 years of experience working in the pharmaceutical or biotechnology industry.
- Exposure to pharmaceutical process technology including analytical specifications, scale-up and engineering, transfer of technology, raw materials, economics and regulatory constraints
- Must possess strong project management skills.
- Must have capability to relate to and work with internal team members as well as external clients.
- Must be able to develop multi-step syntheses of complex molecules.
- Must have proven skills in the field of synthetic organic chemistry (including scientific and patent literature reviews) in pharmaceutical chemistry

Interested parties please send email to hr.rdstaff@alphoraresearch.com

We thank all applicants, but regret that only those short-listed will be contacted.
